

C++ PRACTICAL QUESTIONS

***1. Write a program (WAP) to input two numbers and an operator choice (+, −, *, /). Perform the binary arithmetic operation according to the given choice and display the result.**

2. Find the sum of digits of a number repeatedly until the sum becomes a single-digit number.

3. Find and print all prime numbers between 1 to n.

4. Write a program to multiply two matrices and display the result. Also validate that the number of columns of the first matrix is equal to the number of rows of the second matrix.

5. Display the top 3 students who have obtained the highest marks among n students.

**6. Check whether a number is an Armstrong number or not.
(An Armstrong number is a number whose sum of its digits raised to the power of the number of digits is equal to the number itself.)**

7. Implement Bubble Sort in C++.

8. Implement Binary Search in C++.

9. Find and print all Armstrong numbers between 1 to n.

10. Write a recursive function to find the sum of digits of a given number.
